

ADDITIONAL NOTE CONCERNING USE OF FINALFINISH™

Compounds #1 and #2 are not recommended for use in the acceptable shooting factory barrel or the hand-lapped barrel!

A hand-lapped custom barrel, or a factory barrel that is already shooting acceptable groups [see NOTE on reverse], should already have good interior bore uniformity. However, when barrels are chambered, annular tool marks are created in the chamber and throat areas by the chambering reamer. Polishing most of the tool marks out of the chamber is relatively easy; removing the tool marks from the throat is not.

This is where FinalFinish™ performs extremely well, and this will be its primary function on these barrels. When using the FinalFinish™ kit for smoothing and polishing the throat, it is recommended that only the #3 through #5 polishing compounds be used.

5 SPECIAL INSTRUCTIONS FOR "GOOD" BARRELS [SEE NOTE]

Use 10 bullets of #3, followed by 10 bullets of #4, and 10 bullets of #5. This is a total of 30 bullets. Clean between each 10 rounds.

This will polish the throat of your barrel as well as polish the bore for extended accurate shooting and ease of cleaning.

Now you will be on course to use the balance of the bullets in the FinalFinish™ kit. The remaining bullets of compound #3, #4, and #5 can be used after the barrel is 1/2 to 2/3 worn to rejuvenate the throat area.

[NOTE] – In our summation, the difference between an acceptable shooting barrel and one that is not is the difference between a rifle that will shoot 1/2 inch groups at 100 yards versus one that shoots 1-1/2 inch groups. Keep in mind, not all custom barrels perform well, and some barrel makers hand lap some of their barrels but not others. Testing starting accuracy is the best way to determine whether you should follow the standard FinalFinish™ instructions or limit use to compounds #3, #4, and #5.

OTHER PRODUCTS

Other FinalFinish™ products include specially coated loaded .22 rimfire ammunition. The **FinalFinish™ .22 Rimfire Kit** is designed to uniform, smooth, and polish the bores on your favorite rimfire rifles and handguns.

Also, new FinalFinish™ centerfire calibers are available and include .303, 8mm (.32), 338, and .375.

Please visit us online at zediker.com for product information and purchase, and all the latest FinalFinish™ information and updates.

While you're there, check out other products by David Tubb, including his championship proven **SpeedLock™** firearms ignition enhancement line for bolt action rifles and the Ruger® 10-22™; and the ergonomic **SlipGrip™** pistol grip extension for AR15-type rifles.

New products are always in the works!
