Produced by 11-time
National High-Power
Champion, David Tubb

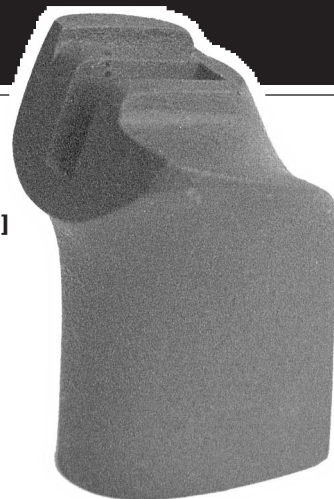

"tactical spec, target quality"

FITS AR15/AR10/SR-25 and TUBB 2000 [SCREW INCLUDED]

EASY DROP-IN INSTALLATION

TOUGH COMPOSITE MATERIAL

SURFACE TEXTURE PROVIDES NON-SLIP HOLD

Superior Shooting Systems Inc. — 806/323-9488 • 800 N. Second St. • Canadian, Texas 79014 USA

Get a grip on your gun!

The David Tubb Tactical-Target molded composite grip is contoured and sized to put the shooter in complete control of his AR-style firearm (it also fits the TUBB 2000). Other stock or accessory grips tend to be too small and angled and profiled incorrectly for optimum holding power and control.

The Tubb Tactical-Target Grip is correctly contoured to provide optimum hand and arm positioning from any shooting position, or any shooter's holding preference. It has a progressive contour that feels equally good with "high" or "low" hand positioning. This part will greatly enhance the shooter's integration, comfort, and effectiveness.

If you extend your arm and allow your hand and wrist to sit naturally, you'll see that the hand is not positioned vertically. It will be turned somewhat toward the left or palm down (right handed shooter). When the hand is allowed to attain this position on the rifle it is in a much more natural position for improved trigger control and safety operation. The Tactical-Target Grip accounts for this natural hand positioning by providing more material in the right areas.

The ergonomic thumb shelf is designed to assist the shooter in attaining a better hand-hold but not forcing a set position as other pistol grips do. Its progressive contour, and ease of modification, ensures suitability under any circumstance. Allowing the thumb to rest extended against this area of the pistol grip not only enhances comfort but greatly improves trigger control and ability to operate

the rifle's safety. Better shooters know that by extending the thumb the trigger finger is allowed to work more independently and, therefore, more precisely.

Additionally, the Tactical-Target Grip provides ample material for custom adjustment should the shooter so desire. The super-strong molded composition design means no worries about compromising component strength if custom contouring is desired. The textured surface of the Tactical-Target Grip helps you keep a much more secure, slip-proof handle on the rifle in high heat and humidity conditions.

Installation

The Tubb Tactical-Target Grip is precision-molded, so nothing other than dropping on the unit and tightening the screw is required on most AR15 derivatives.

We have found that the easiest way to install this grip is to invert the rifle and gently push or tap the grip onto the lower receiver, taking care to make sure the safety spring fits into the new grip (small hole). Then insert and tighten the 1/4-inch allen head bolt (supplied with grip) to secure the grip to the lower receiver.
